

AIDEA User Guide

The AI-Driven Educators Academy

The AI-Driven Educators Academy (AIDEA) redefines how artificial intelligence integrates into European teacher education. Unifying research from leading Erasmus+ and Horizon Europe initiatives, AIDEA offers a modular, research-backed training framework that moves beyond conventional teacher preparation — treating AI not just as a tool, but as a catalyst for pedagogical transformation.

The three pillars

- **Teaching About AI** — building educator AI literacy and ethical awareness.
- **Teaching With AI** — equipping teachers with AI tools for formative assessment and adaptive learning.
- **Teaching For AI** — preparing students for an AI-driven future through critical thinking.

Funded by the European Union through the Erasmus+ and Horizon Europe programmes.

AIDEA User Guide

AIDEA is a training platform that helps teachers learn to **use AI**, **prepare students for AI**, and **teach about AI**. This guide explains what each type of user can do.

Contents

- The three learning pillars
 - Accounts and roles
 - Creating an account
 - Signing in and choosing your language
 - For teachers
 - For content creators
 - For administrators
 - For AIDEA partners (reviewers)
 - Sending feedback
 - Frequently asked questions
-

The three learning pillars

Every course belongs to one of three pillars:

Pillar	Focus
Teach with AI	Using AI tools to plan, teach and save time.
Teach for AI	Preparing students for a world shaped by AI.
Teach about AI	Teaching students what AI is, including its limits and ethics.

Courses are also tagged with one or more **subjects** (Mathematics, Physics, History, Languages, ..., or *General / All*) and a **level** (Beginner, Intermediate, Advanced).

Accounts and roles

There are four roles:

- **Teacher** — the default role. Learns through courses and a personalised pathway.
- **Content creator** — everything a teacher can do, plus authoring courses and viewing

analytics.

- **Administrator** — manages users, roles and platform settings.
- **AIDEA partner** — reviews assignment submissions.

New accounts start as **teachers**. A teacher can request content-creator access from their profile; an administrator approves or declines it.

Creating an account

If you don't have an account yet:

1. On the sign-in screen, select **Register** to open the sign-up form.
2. Enter your first and last name, a username, your email address and a password (you can also add your gender and country), and accept the Terms of Service and Privacy Policy.
3. We'll send a **verification email** — open it and confirm your address. Until you do, a reminder banner appears in the app, and you can resend the email from there.
4. You'll then answer a few short onboarding questions so the platform can personalise your pathway.

Signing in and choosing your language

1. Open the platform and sign in with your username and password.
2. The interface is available in **nine languages**: English, Greek, French, Spanish, Italian, Finnish, Swedish, Norwegian and German. Use the language switcher in the header — or on the onboarding screen — to change it at any time; your choice is remembered.

Forgot your password? Select **Forgot your password?** on the sign-in screen and we'll email you a link to set a new one.

Course content can also be offered in your language when a creator has translated it; otherwise it falls back to the original language.

For teachers

1. Onboarding

The first time you sign in, a short setup wizard runs (about two minutes):

1. **Your subject** — pick the subject you mainly teach.
2. **Teaching level** — primary, secondary, higher education, vocational or adult education.

3. **Learning goals** — what you want to get out of the platform (select all that apply).

When you finish, AIDEA builds your personalised pathway and invites you to the **AI Competency self-assessment** (see below). You can take it straight away or skip it for now and return whenever you like.

2. Home

Your home page shows:

- A **Continue learning** banner for the course you were last working on.
- **Recommended for you** — courses matched to your profile and activity (only shown when recommendations exist).
- The three pillars with your progress in each.

3. Finding and enrolling in courses

Go to **Courses** to browse the full catalogue. You can:

- **Search** by title.
- **Filter** by pillar and by level. By default the level filter is set to your own competency level, so you see courses that fit you first.
- See each course's **subjects** as tags on its card.

Open a course to read its description, learning outcomes and module list, then select **Enroll**.

4. Taking a course

Inside a course you work through **modules**, each made of **lessons**. Lesson types include:

- **Text** — rich formatted reading material.
- **Video** and **PDF** — play/read embedded directly in the page.
- **Image** — shown inline.
- **Quiz** — answer questions and get immediate feedback; your answers are saved.
- **Assignment** — write and submit a response for review (see *AIDEA partners* below).

You can take personal **notes** on each lesson. Mark lessons complete as you go; your course progress updates automatically, and reaching a module marks the earlier ones complete.

5. My Pathway

My Pathway is a personalised, ordered list of courses built for you from:

- your **competency level** (so courses match your ability),
- your **preferred pillar(s)**,

- your **learning goals**, and
- your **subject**.

If you change your preferences (see below), your pathway is rebuilt to match.

6. My Learning

My Learning collects your enrolments in three groups: a *continue learning* banner, courses *in progress*, and *completed* courses.

7. Profile and preferences

On your **Profile** you can manage:

- **Personal information** — name, email, subject, school, country and more.
- **Learning preferences** — preferred learning format, **preferred pillar**, weekly goal, and email/progress notifications. Changing your preferred pillar re-shapes both your recommendations and your pathway.
- **Language** and **account settings** (including changing your password).
- A **Content Creator access** request (see below).

Your profile header also shows your current **AI competency level and score**.

8. Your AI Competency self-assessment

AIDEA offers an **AI Competency self-assessment: 24 short statements** grouped into **six areas** of AI competency. For each statement you say how much you agree, from **Strongly disagree** to **Strongly agree**.

- You can **Skip for now**, **Save and exit** to resume later, or **Finish** once every statement is answered.
- When you finish you get a **results page**: an **overall level** — Beginner, Intermediate or Advanced — plus a breakdown showing your level and average in each of the six areas.
- Your overall level appears on your **Profile** and, together with your activity, shapes your recommendations and pathway.
- You can reopen the assessment any time from your **Profile**. Your previous results stay in place until a fresh attempt is finished, and you can **retake** it once a new attempt has been made available to you.

The AI Competency assessment is available to everyone — teachers, content creators, AIDEA partners and administrators.

Your competency level can also **change over time**: completing courses and staying active keeps it current, while a long period of inactivity can lower it. When it crosses into a new band, your recommendations and pathway adjust.

9. Requesting content-creator access

If you want to author courses, open **Profile** → **Content Creator access**, describe why, and submit the request. An administrator reviews it; if approved, your role changes to content creator and the **Authoring** and **Content Analytics** sections appear.

For content creators

Content creators have everything a teacher has, plus two extra areas: **Authoring** and **Content Analytics**.

Authoring a course

Open **Authoring** and select **New Course** (or **Import course**). For each course you set:

- **Title, description** and **learning outcomes**.
- **Pillar, level** and **subjects** (choose all the subjects the course is for, or *General / All*).
- **Source language** — the language the course is written in.

You are set as the course's **author** automatically; administrators can reassign authorship if needed.

Modules and lessons

Within a course you add **modules**, and within each module you add **lessons**. Drag to reorder. For each lesson pick a type:

- **Text** — write formatted content in the built-in **rich-text editor** (headings, bold/italic, lists, links).
- **Video / PDF** — paste a URL, or upload a PDF/image file directly.
- **Image** — upload or link an image.
- **Quiz** — add questions, each with options; mark the correct answer(s).
- **Assignment** — write the instructions students will respond to.

A live **preview** shows how each lesson will look to learners.

Publishing and editing

- **Publish** a course to make it visible to teachers.
- A published course can still be edited by **its author** (and unpublished if needed).
- You can **delete** a course you authored.

Translating a course

Use the **language bar** in the course editor to translate a course into any of the supported languages. Translations are produced by the platform's translation service; you can review and edit the translated text per language. Learners then see the course in their chosen language, with a fallback to the original.

Importing and exporting (Excel)

- **Download template** gives you a blank Excel workbook with the correct structure and drop-downs.
- **Import course** creates a new draft course from a filled-in workbook.
- **Export** downloads any course as a workbook (useful for bulk editing or transfer).

Content Analytics

Open **Content Analytics** to see engagement:

- **Summary** cards: total enrolments, completion rate, quiz attempts and courses you created.
 - A **per-course breakdown** across the published catalogue.
 - For **your own courses**, expand **View teachers** to see each enrolled teacher's progress, **time spent**, and their **quiz answers** (what they chose versus the correct answer).
 - **Download Excel** exports a workbook with one sheet per course and one row per enrolled teacher.
-

For administrators

Administrators have two management surfaces.

The admin dashboard (in the app)

The in-app **Admin** area has three tabs:

- **Users** — see every user and change their **role** (teacher, content creator, AIDEA partner, admin). You cannot change your own role.
- **Requests** — review pending **content-creator access** requests: approve (which promotes the user) or decline with a reason.
- **System** — **Refresh recommendations** re-computes personalised recommendations for every teacher immediately, instead of waiting for the nightly run.

The Django admin (</admin/>)

For deeper configuration, open `/admin/`. From here administrators can manage:

- **Users and profiles** — roles, subject, competency and more.
- **Courses, modules and lessons** — including reassigning a course's author.
- **Subjects** — add, rename, reorder or deactivate subjects in the shared taxonomy.
- **Onboarding questions** — edit the competency knowledge-check questions, their options and each option's points. Changes take effect for new onboardings.
- **Learning pathways** — the competency-band templates that name each pathway.
- **Recommendation settings** and **learner-activity settings** — tuning weights, the competency-decay rules and quiz thresholds.

Note: onboarding questions edited here are stored as written; the rest of the interface stays translated in every language.

For AIDEA partners (reviewers)

The **AIDEA partner** role reviews **assignment** submissions. When a teacher submits an assignment, it enters a review queue. Reviewers (course creators, AIDEA partners and administrators) can open the queue, read each submission, and approve it — which marks that lesson complete for the teacher — or return it.

Sending feedback

You can send feedback at any time from the **Documentation** page:

1. Choose a **category** — bug, suggestion, general feedback, feature request or content issue.
 2. Write your **message**, and optionally **attach** an image or file, or **add a link**.
 3. **Submit**. Your past submissions are listed there so you can track what you've sent.
-

Frequently asked questions

I don't see Authoring or Content Analytics. Those areas are for content creators. Request access from **Profile** → **Content Creator access**; an administrator will review it.

My recommendations look empty. Recommendations appear once you have a profile and some activity. Administrators can also trigger a refresh from **Admin** → **System**.

My pathway didn't change when I changed my preferred pillar. It should rebuild

automatically. Re-open **My Pathway**; the order reflects your preferred pillar, goals, subject and competency level.

A course shows in its original language, not mine. Course content is translated per course by its creator. Where a translation isn't available yet, the original language is shown. The interface itself is always in your chosen language.

Can I change the onboarding questions? Only administrators can, via the Django admin. See *For administrators*.

I forgot my password. Select **Forgot your password?** on the sign-in screen. We'll email you a link to set a new one.

I was asked to verify my email. After registering, open the verification email we sent and confirm your address. Until you do, a reminder banner appears in the app; you can resend the email from that banner.

There's a maintenance notice at the top of the page. Occasionally the team schedules maintenance. When that happens, a banner shows the planned window so you know when the platform may be briefly unavailable.

I was invited to take part in a study. From time to time, teachers may be invited to join a research study with a short pre/post questionnaire. Taking part is optional — you can decline and keep using the platform normally.

Where do I send feedback or report a problem? Open the **Documentation** page and use the feedback form. See *Sending feedback*.
